

## ESTABLISHMENT OF NETWORK CONNECTIONS

### ABSTRACT

- 5    Upon downloading of a home page for example, which contains two or more links to  
other pages (either within the same site, or part of a different site), the links to those  
pages are pre-emptively actuated, i.e. before manual actuation by a user.  
Consequential download of these pages may be either performed simultaneously but  
at different speeds, thereby reflecting pre-determined weightings for each of the  
10   pages, or one after the other, with the order reflecting the weightings.
